

CORNER GUARD

Field Installation

Using the FIBER FENCE Corner Guard is an easy way to guide cable around corners without creating attenuation or damage. It can be attached to fencing, posts or structures of varying shapes, sizes and materials. Inside or outside corners, vertical or horizontal mounts are no problem for the Corner Guard.

It is also handy to use to hang excess cable in an installation or for future use.

Mount the Corner Guard with nails, screws, or cable ties using any of the multiple openings.
