

MINI MOUSE TRIP

Field Installation

Use the 3 center holes to nail, screw, or strap the Mini Mouse Trip Base to the fence.

The cable between the Mini Mouse Trips should be pulled and secured so there is no slack in the cable.

Place the cable in the Base as shown. Secure the cable on the right side using the double stick tape and hinged top. The cable should move freely through the clip on the left.

Slide the Cover over the top of the Base and attach it using cable ties through the outside holes.

Insert the foam pieces into each end of the Cover to protect the fiber in the trip.

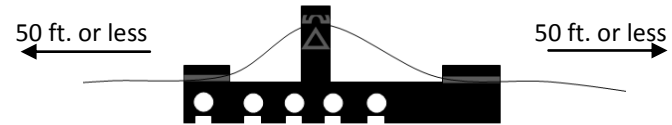

Zip ties can be used to secure the cable to the fence between mouse trips.
