

The 3-Step attenuators are complete passive device using bend radius of a 3mm jacketed cable as a means of attenuation without introduction back-reflections. Designed for use at 1310nm, attenuation will be lower at 1550nm. Available in 3 attenuation ranges, each with 3 possible attenuation levels. Leaves no lasting effect on cable jacketing.

## SPECIFICATIONS

**1310nm**

2-7dB, 5-15dB, 5-20dB

\*Attenuation values are at 1310nm, and are approximate. Actual values will be influenced by jacketing material and thickness, and internal fiber coatings.

Part Numbers:

F1-10007 - 2-7dB attenuator (1310 nm Singlemode)

F1-10015 - 5-15db attenuator (1310nm Singlemode)

F1-10020 - 5-20db attenuator (1310nm Singlemode)
